Outdoors they may be sown any time in June to August—the earlier the better, for the plants will then become stronger and better established before winter. A coldframe is an ideal place in which to sow Perennials, but, if you have none, prepare a seed-bed of finely sifted light soil, made rich by adding and mixing with it thoroughly well-rotted barnyard manure, sheep manure, or humus. Sow the seed in shallow drills or squares of suitable size, partitioned off with laths; cover \(\frac{1}{8} \) inch or more, according to the size of the seed—the very fine ones should only be pressed into the soil; press down with a flat board; water gently but thoroughly through a fine rose and do not allow the soil to become dry while the seed is in the process of germination, for as soon as the seed has sprouted and until it becomes a plant with roots, its life depends entirely on soil-moisture. It is fatal to allow the soil to become dry for even five minutes during this period and nearly all failures in growing perennials are attributable to this neglect. Seed-beds

must, therefore, be shaded from the sun in summer and carefully watched and watered until the plants have made from four to five leaves. While most of the hardy flowers germinate in from eight to fourteen days, there are some which take a month or more before they come up, so do not become impatient. If seedlings come up too thick, pull out some and transplant elsewhere in boxes or other seed-beds, and when plants are finally large enough they will be ready for setting out in their permanent places. This, however, should not be done later than October 1, in order to allow sufficient time for them to take a firm hold in the soil before frost. Cover over winter with leaves or salt hay, applied after the ground is frozen (about the middle of December). Too early covering sometimes causes heating and consequent decay of plants, and it also encourages field-mice, which seek this protection for their winter quarters and often do harm to the plants. Explicit cultural directions will be found on each packet of our seeds.

Plant a Strawberry Bed this Summer ENJOY YOUR OWN BERRIES NEXT JUNE

One hundred plants, with fair cultivation, will yield thirty quarts of berries the first year in a space of only 4 by 50 feet

Utilize the vacant spaces in your garden. Our Pot-grown Strawberry Plants can be set out any time during July and August, and even as late as September 15. Early plantings produce biggest crops. Set plants in rows, I foot apart. Allow space of 2 feet between rows for cultivation. Finch off all runners as they appear and cover the bed lightly with leaves, salt hay, or manure in December after the ground is frozen. Remove covering in early spring; if salt hay is used it may be left between the rows as a soil-mulch to keep the soil moist and the berries clean.

Pot-Grown Strawberry Plants

Ready for shipment July 25, but order now. Early Orders always assure Strongest Plants All varieties offered are perfect flowering, of largest size and best flavor

Three Specials for the Home Garden

PREMIER. (Extra early.) The largest and by far the firmest of all early varieties. Fruit of a brilliant scarlet-crimson color and very luscious, having a delightful aroma and a rich, wild Strawberry flavor. No variety ripens earlier. Excels all others.

BIG JOE. (Midseason.) An unusually healthy, vigorous, and productive variety. The berries are large, light glossy crimson, and of excellent flavor. It is one of the very best of the midseason varieties and we cannot recommend it too highly. The color is particularly attractive.

CHESAPEAKE. (Late.) Possibly the finest and most luscious of all Strawberries for the home garden. The berries are very large and firm and have the luscious flavor of the wild Strawberry. The plant produces Strawberries in great quantities.

In planting the above three varieties, you will lengthen your Strawberry season considerably and have berries for fully a month.

Pot-grown plants of the above: \$2.50 for 25. \$7 per 100

Pot-grown plants of the above: \$2.50 for 25, \$7 per 100

Marshall. A very large midseason berry of rich flavor and almost devoid of acid, of a beautiful dark crimson color when fully ripe; very productive.

Barrymore. Midseason. Large, broad and bluntly conical; firm and of excellent quality.

Bushel Basket. Recognized as the largest Strawberry. The fruit is firm and of finest flavor.

\$3 for 25, \$10 per 100.

Early Ozark. Large, broad, extra-early; fruit almost square and of a rich flavor.

Edmund Wilson. The Giant Strawberry, introduced by Dr. Van Fleet. Very dark in color, of immense size—individual berries are often the size of a small apple.

\$3.50 for 25, \$12 per 100.

Schofield. Berries of enormous size, very broad and thick, of rich aromatic flavor.

Strong pot-grown plants, except where especially priced, \$2 for 25, \$6.50 per 100

Fall or Everbearing Strawberry Plants

Just as luscious as the June varieties. Bearing in September and October; in fact, they fruit continuously from June until frost, but if you want a heavier crop of berries in the fall, pinch out all blossoms until about July 20 or August 1.

PROGRESSIVE. We consider this the best and most productive of the fall-fruiting varieties. The berries are produced in large clusters and have a fine aromatic flavor.

LUCKY BOY. Berries conical in shape, deep red in color, and of good flavor.

SUPERB. A very vigorous variety that produces quantities of fruit of fine flavor.

Strong pot-grown plants of Everbearing varieties, \$3.50 for 25, \$12 per 100

Superb Modern Peonies

FOR FALL PLANTING

A selection made now assures a special pick of the strongest roots

WE BEGIN TO SHIP OUR PEONY ROOTS IN SEPTEMBER—ORDER NOW

Always plant Pconies in the fall. It is the only time, for then the roots are in prime condition for planting. While Pconies grow well in any good garden soil, it will amply repay you to prepare the soil especially by thoroughly mixing with it a large quantity of well-rotted barnyard manure or humus. Set the roots at least 2 feet apart and cover the top eyes not more than 2 to 3 inches. This is important, as deep planting often results in blind growth.

results in blind growth.	Each

While the above Peonies are our choice of the best for the home garden, we have nearly 200 sorts growing in our Nursery and can supply any variety desired at the lowest prices.

Beautiful Garden Iris

Bearded Iris, or Fleur-de-Lis

Should be planted in August and September to insure best flowering results the following spring

These Iriscs bloom in May and June, following the Darwin Tulips and form a most delightful group of flowers. All are extremely showy in the garden and furnish excellent material for cutting. Our list includes only the most modern varieties.

"S." represents standard or upper petals; "F." falls or lower petals.

GROW YOUR OWN

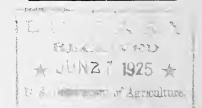

HARDY FLOWERS FROM SEED

It's Lots More Fun-NOW is the Best Time to Do It

Everybody wants Perennials—and wants them in generous measure, to secure the desired effects in color and charm. If you delay and finally buy plants, the cost mounts high; an attractive Perennial border may require several hundred dollars' worth of plants.

Exactly the same result can be secured with \$10 to \$15 worth of SEEDS! And aside from the money-saving you have the fascination of growing your own plants, nursing them from the beginning, and loving them all the more! Sow your seeds now, and the plants will bloom next year. United States Dept.of A Dept. of Horticulture, Washington, D. C. U. S. POSTAGE 1½c. Paid.
